

3SB — Turnover & Possession Report

Overview

Matches: 5 Points: 50 Passes: 444 Turnovers: 31
Opponents: Grut, Iznogood, Mooncatchers, Thac, Wall City

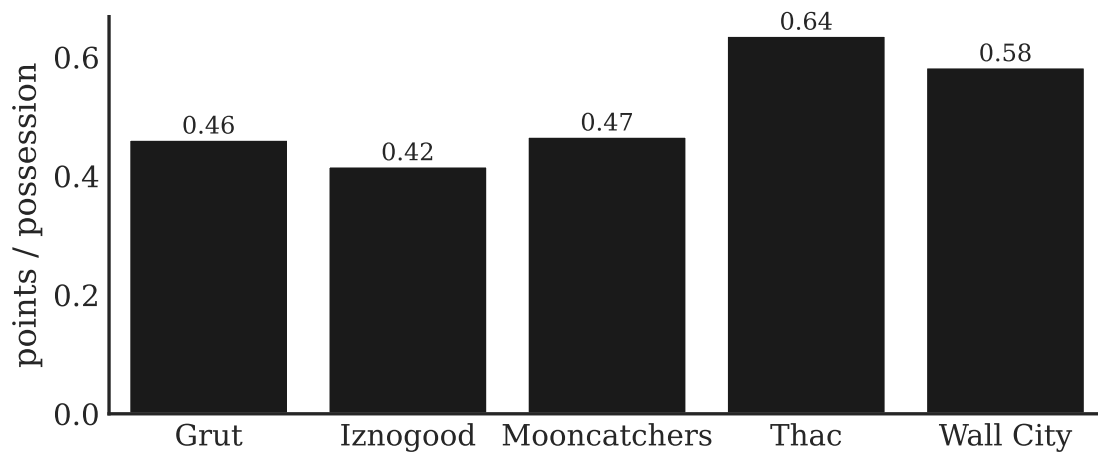

Match-level statistics

Points played per match

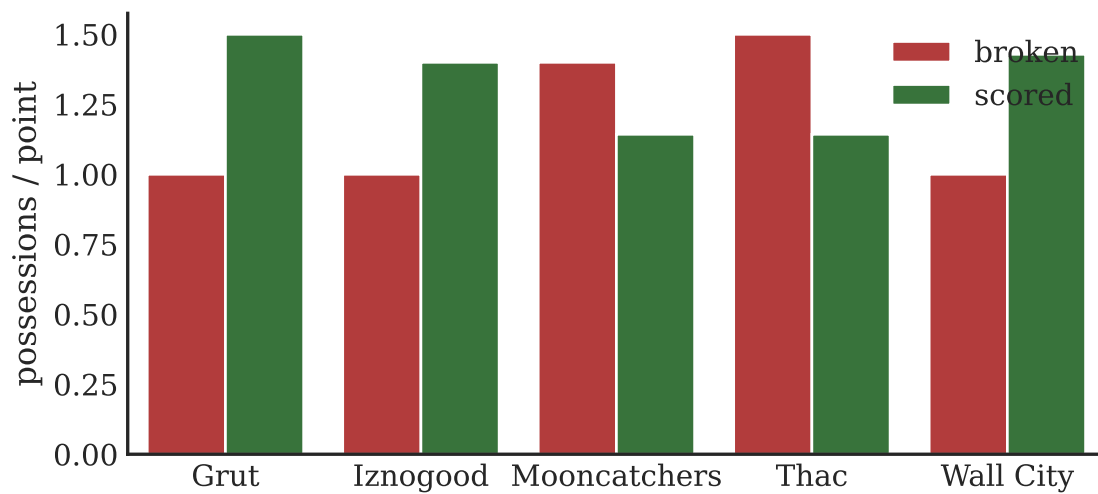

Points per possession (overall scoring efficiency)

For each match: fraction of possessions that converted to a score.

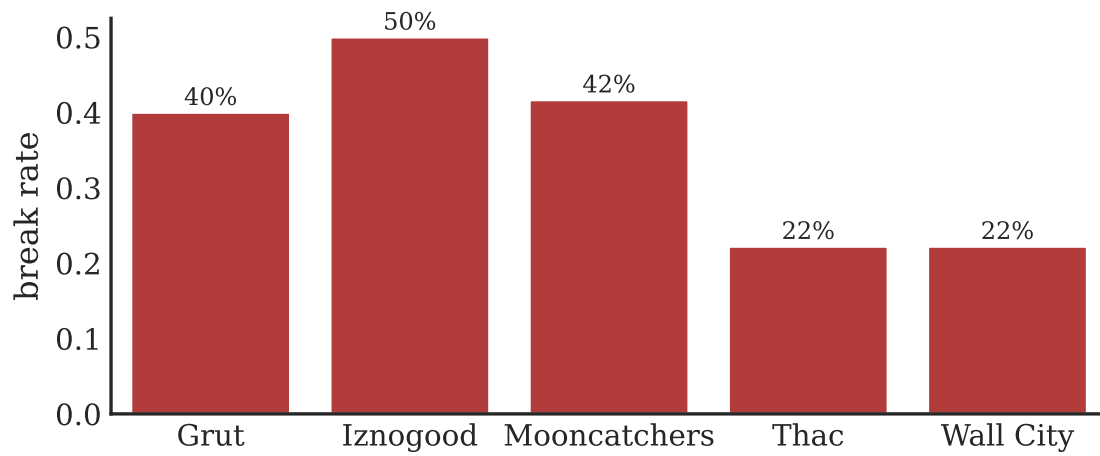

Possessions per point — scored vs. broken

How many possessions did each point take on average, broken down by outcome.

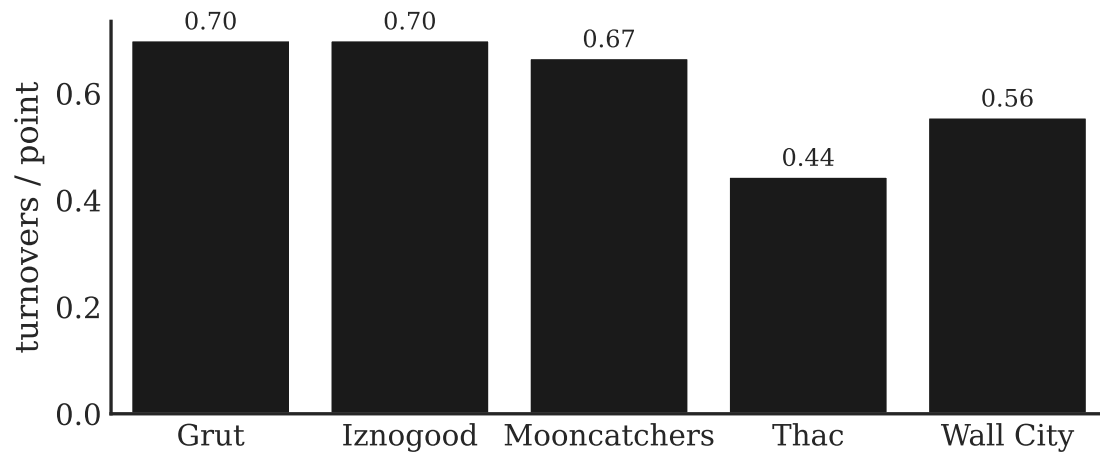

Break rate per match

Share of points we did not score (got broken on).

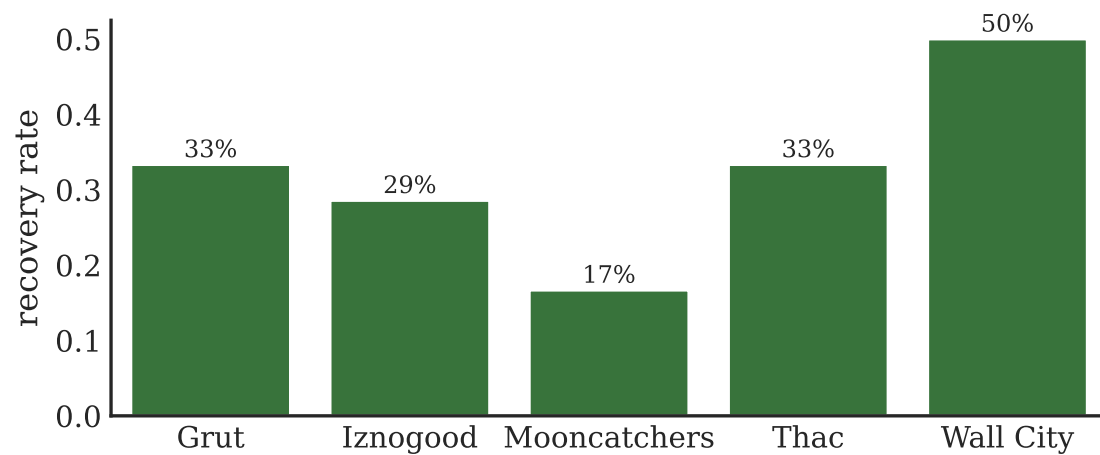

Turnovers per point

Score rate when the point contains a turnover

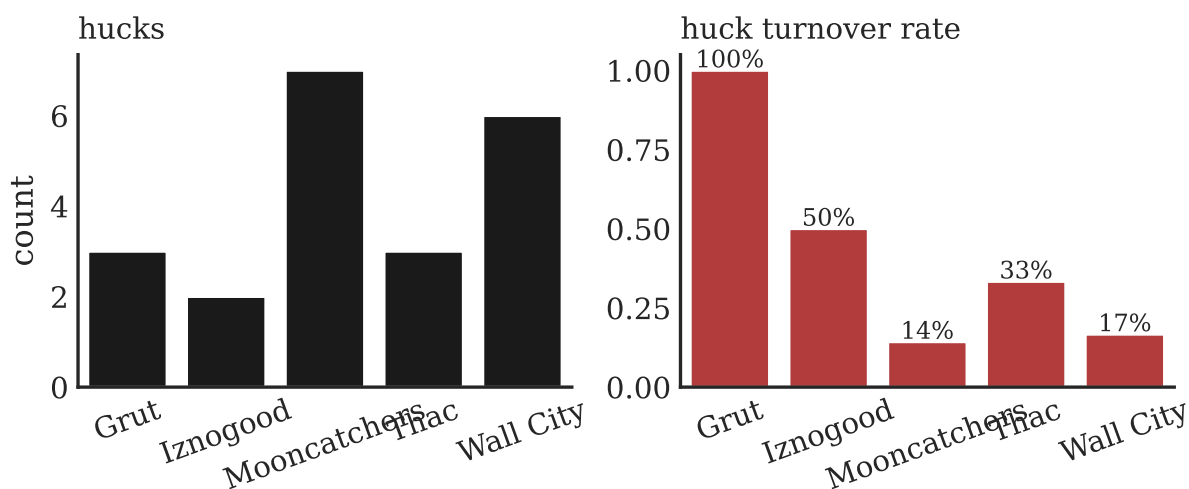

Of points that included at least one turnover, what share did we ultimately score?

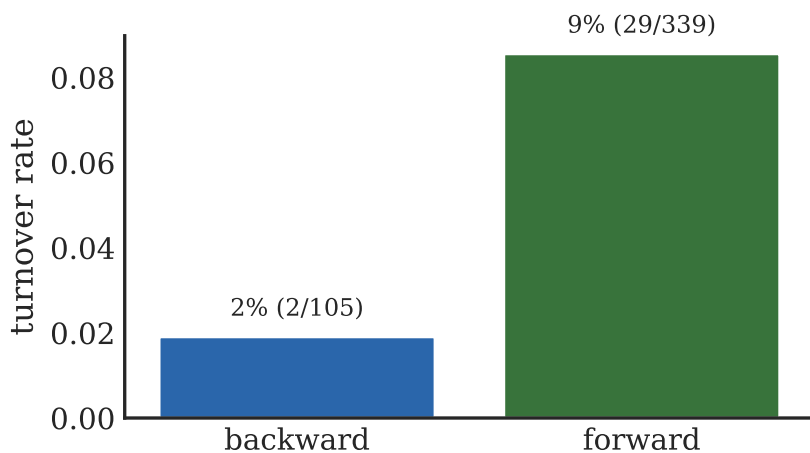

Pass-shape analysis

All passes below are **normalized** to a single offensive direction (left $\square$ right). A *huck* is a pass whose horizontal span covers at least 50% of the in-field (≥ 336 px). A “backward” pass moves opposite to the (normalized) attacking direction.

Hucks per game and their turnover rate

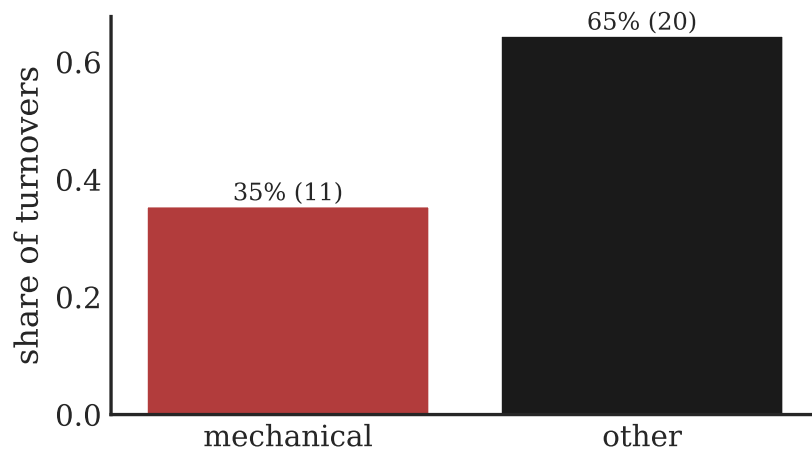

Turnover rate by pass direction (forward vs. backward)

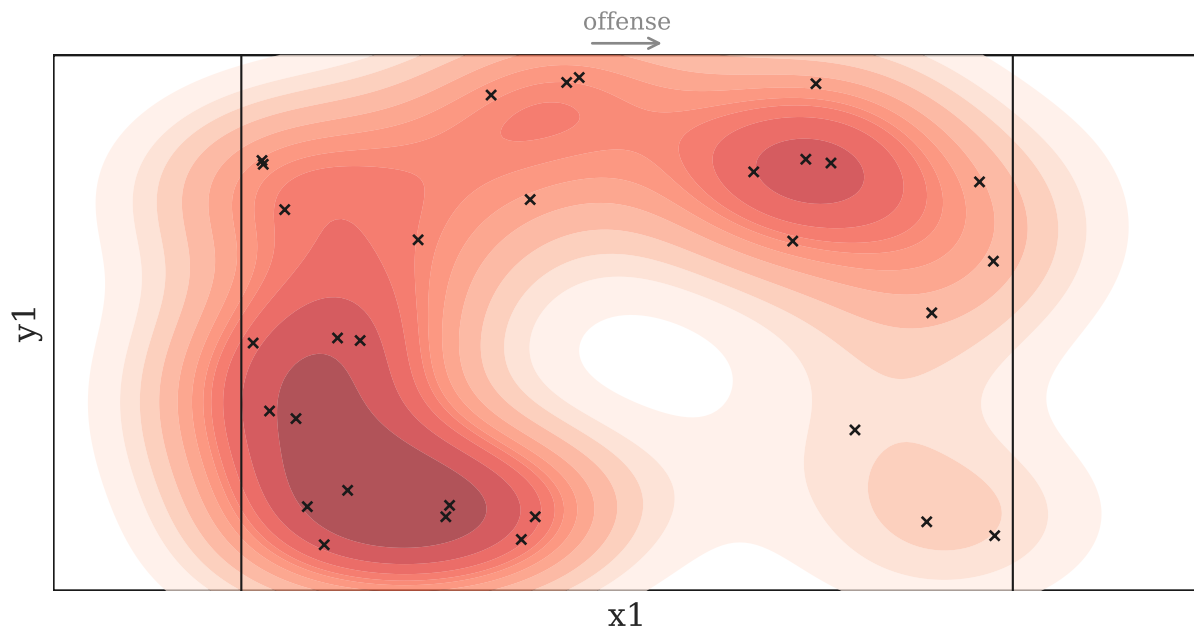

Mechanical vs. tactical turnovers

A turnover is classified *mechanical* when its comment contains “mechanic” (mechanický, mechanicky, ...).

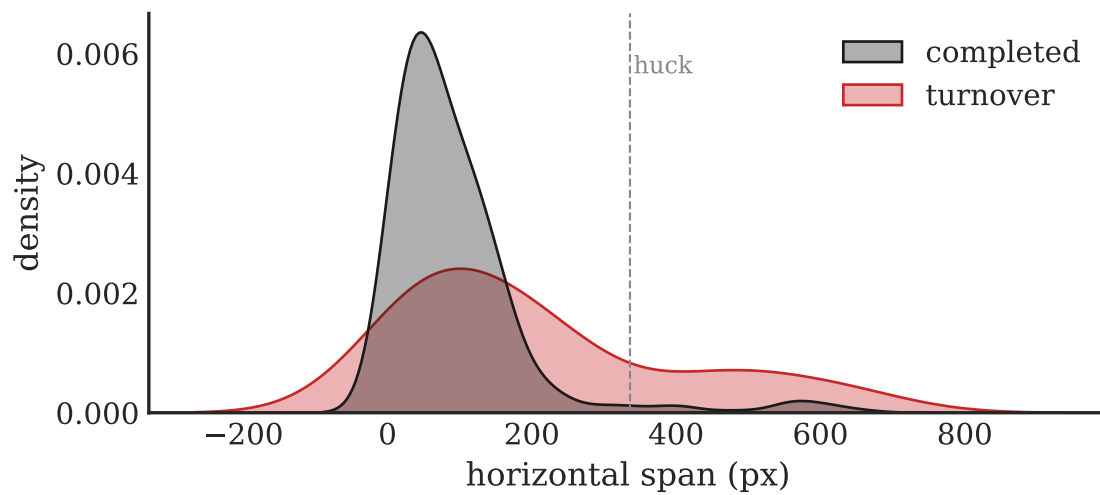

Turnover heat-map

Origins of all turnover passes, normalized to a single attacking direction (offense → right). Brighter = more turnovers initiated from that area of the field.

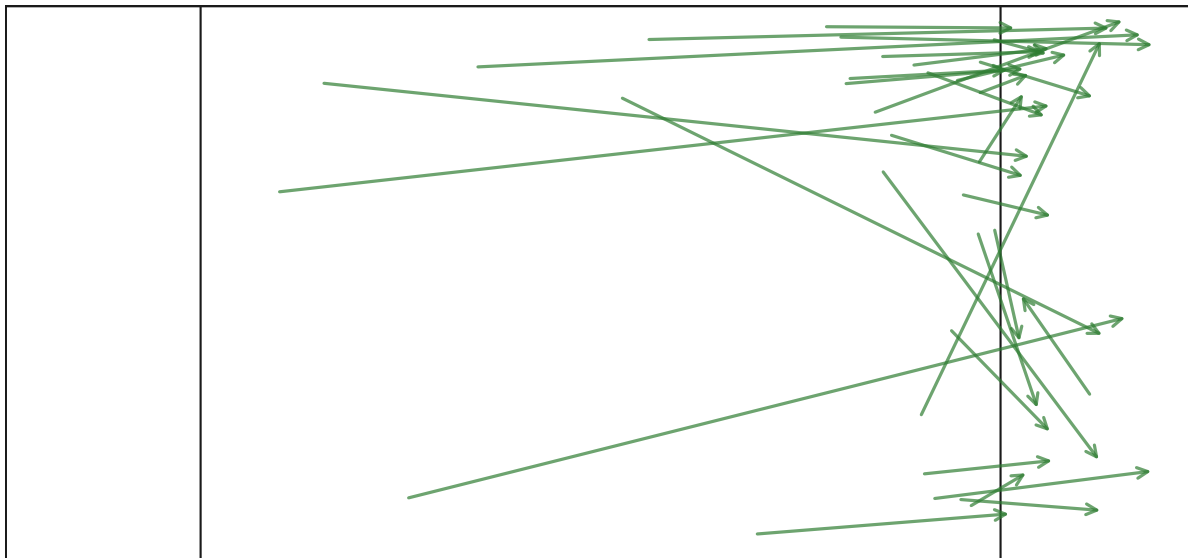

Pass-distance distribution

How long are our passes? Distribution of horizontal span by turnover outcome.

Where do successful scores originate?

Origins of the assist (last pass before a score), normalized.

Summary table

	opponent	points	scored	broken	TOs	poss	pts/poss	TO/point	break %
0	Grut	10.0	6.0	4.0	7.0	13.0	0.46	0.70	40%
1	Iznogood	10.0	5.0	5.0	7.0	12.0	0.42	0.70	50%
2	Mooncatchers	12.0	7.0	5.0	8.0	15.0	0.47	0.67	42%
3	Thac	9.0	7.0	2.0	4.0	11.0	0.64	0.44	22%
4	Wall City	9.0	7.0	2.0	5.0	12.0	0.58	0.56	22%
